EDUCATION

M.S. Computer Science, Arizona State University — Expected May 2027
Mastercard Foundation Scholar | Relevant Coursework: Advanced Operating Systems, Software Security

B.Eng. Computer Engineering, Covenant University — Aug 2022
CGPA: 4.67/5.0 | **Relevant Coursework:** Introduction to Neural Networks, Data Structures & Algorithms

TECHNICAL SKILLS AND CERTIFICATIONS

Languages: TypeScript, JavaScript, Python, SQL

Frontend: React.js, Next.js, Aurelia, Salesforce Lightning Web Components (LWC), Tailwind CSS, shadcn/ui

Testing & Web Development: Jest, Responsive Design, Accessibility, REST API Integration

Backend & Databases: Node.js, Express.js, FastAPI, PostgreSQL, MongoDB

Developer Tools: Git, Linux, Kibana

PROFESSIONAL EXPERIENCE

EdPlus, Arizona State University - Web Application Developer Assistant — Aug 2025 – Present

- Implementing an AI-assisted Salesforce code review workflow integrating seven predefined quality gates across code quality, security, metadata, and release readiness to improve review consistency and identify risks earlier.
- Expanded an Apex test optimization effort from a single assigned class to approximately 60% of the existing test suite, raising overall code coverage to 85% and strengthening release confidence.
- Developed Apex-based backend automation for Salesforce record routing and user reassignment workflows, handling insert and update events to keep records assigned to the appropriate users as availability changed.

Cavista Technology - Software Engineer I, — Mar 2023 – Aug 2025

- Developed a form-to-model workflow using Aurelia and TypeScript, transforming structured user inputs into reusable data models for generating print-ready clinical documents.
- Shipped a user-facing permissions feature in Aurelia and TypeScript that surfaced mobile-access information for applicable permissions, helping users understand the impact of permission changes before making them.
- Collaborated with backend engineers to troubleshoot production failures using Kibana and code-level investigation, reducing investigation time by 35%.

PROJECTS

Laundry Inventory Management System | Next.js, TypeScript, MongoDB, Mongoose

- Built a full-stack inventory and operations platform with RESTful services using Next.js, TypeScript, MongoDB, and Mongoose, centralizing customer, order, item-tracking, and business records across role-based workflows.
- Implemented JWT-based authentication and role-based authorization for Staff/Admin workflows, alongside automated receipt and tag generation, replacing manual recordkeeping and improving staff efficiency by **40%**.

BridgeUp | Canvas-Integrated Peer Support Platform

- Built a Canvas-integrated peer-support platform to help first-generation college students navigate university life through accountability partnerships, personalized academic guidance, and timely access to campus resources.
- Developed a Chrome extension using Manifest V3 content scripts and iframe integration to embed context-aware React widgets into Canvas, delivering course-specific support and personalized semester guidance.
- Engineered a peer-support dashboard with Supabase Realtime-powered check-ins and 1:1 messaging, integrating Claude Haiku through Next.js API routes for personalized campus resource recommendations.

NIMASA Clearance System | Next.js, TypeScript, Tailwind CSS

- Built online approval workflows with role-based dashboards **using Next.js, Tailwind CSS, and TypeScript**, replacing the manual clearance process and enabling digital signatures, tracking, and letter printing.
- Digitized manual clearance workflows, reducing processing time by 40% and enabling 30% more interns to complete clearance independently.
